

**LOCATE STREET  
COVERS WITH THE**

# **I.D. LOCATOR**

## **What it is:**

Developed from a new recyclable elastomer, the small I.D. Locator (3.5"sq. X 4.25"h) adheres to any surface and pops-up after being paved over with up to 5 inches of asphalt for easy locating and identification.

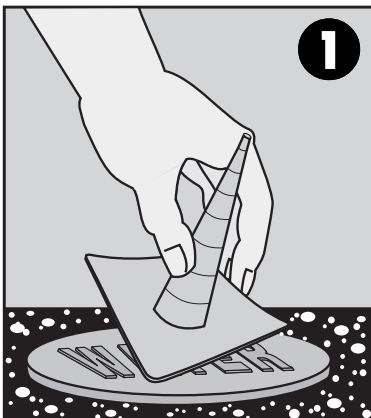

## **What it does:**

Saves time and money by putting an end to painting, measuring, metal detectors, guessing, over-drilling, damage to caps, and costly mistakes.

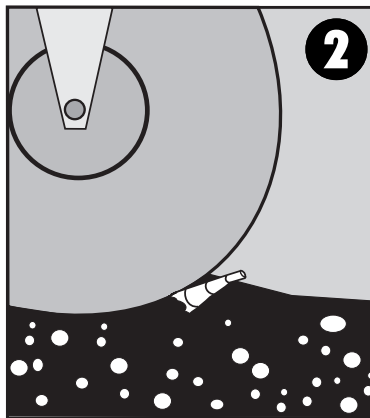

## **Where to use it:**

On any paving job where you need to easily locate all types of sewer, water, gas, electric, or telephone covers under freshly paved asphalt. Can also be used to identify striping.

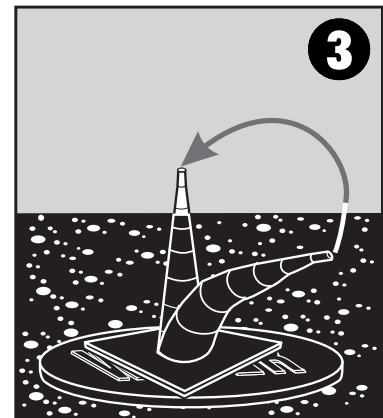

## **Installation Instructions:**

**PLACE IN POSITION:** Just peel off the adhesive protective strip and stick the device on to any metal cover or pavement striping prior to paving.

**PAVING:** This proven, effective device will withstand truck tires, paving machines, and hot asphalt to pop-up after paving, leaving a safe soft, flexible marker indicating the exact location of covers or striping.

**RECOVERY:** When paving is completed, street crews can conveniently return – days, weeks, or months later, to locate and retrieve paved-over covers, caps, or striping. With the I.D. LOCATOR in place, this operation is accomplished quickly, accurately and safely without time-consuming searching and surveying.

**STRONG!  
FLEXIBLE! REUSABLE!**

Withstands temps ranging from  
-40°F to +450°F

11723 Strasburg Bolivar RD. N.W
